Mitsubishi Electric Air Condition Units v2 AC - KNX Gateway Compatibility List

Mitsubishi Electric AC - KNX Gateway Compatibility List

In this document, the compatibilities of Mitsubishi Electric air conditioners with ITR830-1001 are described.

Specified models in the document are referred **indoor units**. If the last user wants to operate an AC unit with a model number not specified in this document might not be compatible with ITR830-1001. Models should not be used without checking model compatibility. The user should contact with supplier for this. Moreover, we recommend the users pay attention to the possible updates of the document.

Compatibility Table

All of the models described in the table below are referred to only indoor units. If a model number is not specified in this list, please contact us for a compatibility check. The connection diagram between the air conditioner interface and the air conditioner indoor unit is detailed in the ITR830-1001 datasheet.

An important point to note is the following: In M series indoor units, TB15 port should not be used for wired control connection. Instead, wired control connection can be made via CN105 port with our MAC series interfaces.
